

ABSTRACT

Klinik Pratama Selamat is a company engaged in services and trade. In the operational activities carried out by Klinik Pratama Selamat, all this time is still manually recorded in the cash book, starting from the data collection process to the purchase, sale, drug inventory calculation and preparation of financial statements. This causes a clear invisible between income receipts, cash outlays and expenses incurred by the clinic. So that it takes an application that can handle these problems to prepare financial statements accurately and clearly automatically. The functionality that will be built in this application is the creation of input forms for data items, input for sales transactions, calculating expenses, history of income and cash expenditure transactions, preparation of income statements, changes in capital and cash flows. This application is made using Android. With this application, it is expected to simplify the process of data collection, sales, and accelerate the preparation of financial reports handled by Kinik Pratama Selamat.

Keywords: Clinic, Sales, Bash Cash Method and Android
