

ABSTRAK

Manami Space is one of the Co-working Space buildings located in Bandung which was established in 2016. Where the location of Manami Space is close to the campus and the city center which is often traversed by urban communities who have a busy work activity with diverse backgrounds. Manami Space is a Co-working Space building, which means a shared work space in which there are workers with diverse backgrounds in different fields with various main facilities and supporting facilities, and enables users to collaborate or expand business networks. The Behavior Approach is used in this design. This is to become a reference in designing the interior working space to better suit the behavior of the user's working style.

In this design, the comparative study phase is related to Co-Working Space, conducting analysis of the Bandung area, and standard analysis of Co-Working Space. The concept of "Space for Collaboration" is a concept applied to this design. It is expected that the concepts used and the objectives of the design of Manami Space Bandung can help provide facilities that suit the needs and activities of its users in working in a co-working space.

Keywords: Manami Space Bandung, Co-Working Space.
