

ABSTRACT

Tourism development has increased throughout 2018. According to the Bali provincial statistics center, the increase reached 22.64 percent. This increase was influenced by the arrival of foreign tourists visiting Bali. This is supported by the natural potential in Bali which is still maintained today. One of the famous tourist attractions in Bali is beach tourism, especially in the famous Bali region. Balangan Bali is one of the many tourist attractions in Bali with natural potential that can still be enjoyed is beach tourism.

This led to many commercial buildings in the area, one of which was a resort hotel. Some resort hotels in Bali apply a minimalist modern concept that is felt to be less suitable with Bali. According to Bali's local regulation number 5 in 2005, every building that is restored must have the character of Bali itself. This is precisely ignored by several resort hotels.

In this design, applying the concept of sustainable design is considered suitable to be applied to resort hotels. Because in general, many resort hotels apply a minimalist modern concept that is considered less suitable for a resort hotel that is close to nature, when viewed from the surrounding environment it is still very supportive to implement the concept of Sustainable Design, then to highlight the Sustainable Design side will be focused on material which can be applied to interior elements.

Application of the concept of Sustainable Design into a space is a movement to care more about the environment. Sustainable Design also emphasizes the use of natural materials and materials that can be reused, brings a good perspective by implementing Sustainable Design into an interior and enhancing the attractiveness of visitors by introducing Sustainable Design to the general public so that it is more appreciated. With the existence of these elements, it is expected that there will be a design renewal. The application of the concept of sustainable design will be combined or combined with the distinctive characteristics of Bali itself so that it can meet the building standards of the local government of Bali.
