ABSTRACT

PT BNI Life Insurance is an insurance company that provides various insurance products such as life insurance (mental), health, education, investment, retirement and sharia. BNI Life Insurance has 2 business line that is individual Unit consisting of Bancassurance and Agency, while for group Unit there are Employee Benefit Open Market and Employee Benefit Consultant, Direct Sales, alternative Distribution, Broker and Business Banking. Each policy closure conducted by the business Consultan earn commission on the premiums paid by the customer. The Registrar of Commission on the BNI Life manual engine uses Excel, so it takes a system to accommodate the insurance premium payment. This app is web based with the object-oriented PHP programming language and MySQL database. This method of developing a waterfall model is used. The application can handle the calculations and records of commission tax of PT BNI Life Insurance, payment of insurance premiums, and salary payments on the commission. This application generates journal reports and payroll printing results at BNI Life Insurance Commission.
