

ABSTRACT

In lectures, the learning process using information and communication technology is called e-learning. The use of e-learning is intended to assist lectures in the delivery of material and also assist students in understanding the material being taught. The learning process at Telkom University is only through class meetings. But learning provided through class meetings is very limited by time, and the collection of assignments that still uses paper is often tucked or lost, and the limited learning resources that can be obtained by students to be able to study independently. Therefore, the existence of e-learning can maximize the learning time obtained by students.

In this research, the software used by the writer is xampp, and the editing text writing software for coding uses sublime text. The author's expectation in this study aims to make the learning done by students be effective, so that the learning process that can be maximized by students.

Keywords: E-Learning, Xampp, Sublime Text, Introduction of Computer Systems
