ABSTRACT

The background of making Application of Budget Data Management and Budget Realization Report of Almalia School is due to problems encountered in recording budget data and also reports on the realization of funds provided by the foundation. The making of this application aims to facilitate financial staf to manage budget data and also reports, as well as facilitate foundations and principals to monitor school fund realization reports. The method used in this application is the prototype method. The stage of prototype is gathering needs, building prototypes, evaluating prototypes, coding systems, testing systems, evaluating systems, using systems. This web application uses codeigniter framework, PHP programming language, MySQL, apache web server, and the script editor used is atomic. The final result of this application is that the financial staf can record details of the submission of the budget to the foundation and also record the report on the realization of the funds. In addition, the foundation can approve the amount of budget that will be given, as well as principals and foundations can monitor reports on school funds realization.

Keywords: budget, report
