

ABSTRACT

Kiara Artha Park is a park located on Jalan Banten, Kiaracandong. The majority of visitors to this park are family. This park has a very wide space that can free up children to play as well as other family members to do various kinds of activities or activities. The playground is filled with children who play in it with their families, but in the play area there are no facilities that can be used by their families or parents while watching them play, such as park benches. Even though this park bench is very important for families who are waiting and looking after their children in the playground. This product is made to provide comfort for families in the children's playground. This product must also have good aesthetic value, so that it can add to the beauty of the Kiara Artha Park. The product has an additional function as storage in the seat holder for storing toys that are around the product. The design of this product is based on material aspects and functions. The method used in this design is the SCAMPER method to discuss and examine more deeply the existing problems. The authors publish park benches that can be used by families in the playground area that can add aesthetic value to the park.
