

ABSTRACT

The application to raise donations for victims of natural disasters is an application that helps donors make donations in the form of money or goods and helps the distribution of donations for victims of natural disasters. Donors can make donations by selecting donations through the android application which is then confirmed by volunteers and after the donations are collected, they will be distributed to victims of natural disasters by volunteers. Making this application is done by the Waterfall method. This application is based on Android with the Java programming language, and MySQL database as a data storage medium. It is hoped that this application can help the public and government in raising and distributing donations.
