ABSTRACT

Web-Based Employee E-Recruiting Application is an application used to facilitate job seekers in finding and applying for jobs and providing facilities for companies in the process of recruiting employees. However, based on the results of the survey there are problems that occur namely when getting a job the job seekers sometimes get jobs that are not in accordance with their capabilities, in addition to the company also sometimes get employees who have abilities that are not in accordance with what is needed by the company. Based on these problems, an application is built that aims to facilitate job seekers to get jobs according to their area of expertise and provide facilities for companies to find employees who have the ability in accordance with the criteria or expertise needed. The method proposed in the development of this system is to use the prototype method, using the MySQL database and Frame Work Codeigniter (CI), and testing on applications is done by black-box testing and user acceptance testing (UAT) methods.
