

ABSTRACT

The phenomenon of waste has become a classic problem that never ends, in Indonesia and in the city of Bandung itself. This problem is a factor that must be resolved immediately because it can affect health, sanitation, and many more. Not to mention the environmental factors that are greatly influenced by polluted ecosystems, many dead plants and animals come out of their natural habitats. The volume of waste in Bandung itself is very high, reaching up to 1,600 tons per day and always increasing by approximately 10% per day. Therefore the need for special attention to the problem of this garbage. Likewise, special attention to the parties involved in the management of this waste, especially to cleaning officers. The high occupational risk of cleaning workers can be supported by good health and safety such as safety gloves. The purpose of designing safety gloves is one of the ways that is expected to be a solution for janitors.
