The Regional Government of South Tangerang City has implemented a Planning, Budgeting and Reporting Management Information System to compile the Regional Budget and is committed to continuing to implement transparency and accountability in the preparation and use of regional cash, therefore the researchers plan to conduct research to design an enterprise architecture as a business solution framework to solve problems in optimizing the use of IT in accordance with the Public Administration and Public Welfare Division of the Finance Subdivision in supporting the performance of the Regional Secretary to maintain flexibility by being open to the public in managing the budget.

The financial sub-division which is responsible for regulating regional budget planning from activity packages to expenditure items, in its daily tasks there are still many deficiencies that must be fixed so as to produce an effective and efficient work product. Effective is meant as an effort to get the expected goals, results or targets with a predetermined time. Efficient is meant to be appropriate or appropriate to do (produce) something (without wasting energy, time, cost); can carry out the task properly and carefully. This study uses TOGAF 9.1 which consists of preliminary phases, vision architecture, business architecture, information system architecture, technology architecture, opportunities and solutions, and Migration Planning. From all these phases an architectural blueprint will be produced and an IT Roadmap for the implementation of the application for the Public Administration and Public Welfare Section, the Finance Subdivision.

Keyword: Blueprint, IT Roadmap, TOGAF, e-Budgeting, and Subbagian Keuangan
