ABSTRACT

Increasing customer awareness of goods and services means that internet use has an influence

in generating consumer responses. The role of the internet functions as a medium for

information and communication, apart from that it can be used as a medium for electronic

commerce or known as e-commerce. Tiktok indicates that there are problems with quality

(quality of information) and trust (trust) mediated by social psychology (social information

information) which has the potential to influence consumer purchasing intentions (purchase

intentions). The aim of this research is to measure service quality, trust, social psychological

distance, and consumer purchase intentions for products sold on the Tiktok platform. The

method used in this research is a quantitative method using a questionnaire as a data

collection tool with 200 respondents as the research sample. The research results show that

Information Quality and Trust had a positive and significant effect on Purchase Intention

through Social Psychological Distancing on the TikTok e-commerce platform.

Keywords: information quality, trust, purchase intention, social psychological distance
