

ABSTRACT

Akhwat Gym is a sports facility that helps Muslim women, especially in maintaining body fitness. Akhwat Gym provides comfortable facilities that Muslim women can access to carry out activities such as Gym, Zumba, Cardio Dance, Fit Dance, Yoga and Pilates. The address is Jl. Mekar Mulya, Mekarjaya, District. Panyileukan, Bandung City. Looking at the current conditions with the increasing interest of women in maintaining fitness, especially at the Akhwat Gym, it is felt that manual transaction recording is not optimal for performance, especially in the financial section in recording, receiving, spending and making reports. Based on these problems, a web-based application was built that can manage recording, receipts, and cash expenditures and produce general journals, ledgers, cash receipts reports and cash expenditure reports. Web-based applications are built by waterfall methods, programming using Hypertext Preprocessor (PHP) with Codeigniter framework, and for testing using blackbox testing. This application has succeeded in helping make it easier for Gym Students to record receive, spend and make reports.

Keywords: receipts, expenses, making reports.
