

ABSTRACT

DESIGNING A MOTHER AND CHILD HOSPITAL CLASS C IN MAJALENGKA DISTRICT

According to the Central Statistical Agency of Majalengka Regency, the birth rate in Majalengka Regency experienced a very drastic increase from 2019 to 2020 — 2021. Judging by the above data, the presentation of the maternity process assisted by health workers annually reaches 98%. The increasing birth rate that occurred in Majalengka Regency is in line with the need for additional health facilities and that are able to accommodate the diverse needs of the Community in the field of health or other support facilities. Based on this background, the Mother and Child Hospital Design in Majalengka Regency was selected, where to carry out further studies several researches were carried out such as outdoor survey, interviews, online questionnaires, comparative studies, literature studies, and precedent studies. The results of this design realized the Mother and Child Hospital, which not only provides health facilities, but supporting facilities such as Emergency waiting rooms, lighting systems, and the provision of openings for natural rentals to enter at noon Good days. This design is done with the approach of space psychology to provide tranquility, reduce stress, and reduce fear of patients or hospital visitors.

Keywords: Maternal and Child Hospital, Spatial Psychology Approach, Comfortable, Mindfulness, Calmness, Reducing Fear.
