

ABSTRACT

Al-Irsyad High School, Tegal City, is a boarding school or dormitory-based high school. Boarding school is a school system with dormitories, where students and teachers as well as school administrators live in dormitories within the school environment for a certain period of time. In the school environment, students can interact with fellow students, even interact with teachers at any time. They can see good examples directly in their environment without delay. In this way, students' cognitive, affective and psychomotor education can be better and optimally trained. Tegal City Al-Irsyad High School plans to redesign the Tegal City Al-Irsyad High School building which contains dormitories for students to be able to realize the identity image of Tegal City Al-Irsyad High School in the implementation of space both physically and in the values contained in the design interiors. Currently, the interior building of Al-Irsyad High School in Tegal City does not yet reflect the branding of the Islamic school itself, and has not been able to implement a spatial character based on Islamic values and principles in building an image in accordance with the vision and mission of Al-Irsyad Al-Islamiyah High School in Tegal City. This has become urgent, so it is necessary to redesign school buildings to focus on meeting the facility needs for high school students. The importance of branding for schools is like building a personal branding reputation. This allows people to find out about your school and relate to what it has to offer. Apart from that, based on the results of observations carried out at Al-Irsyad High School, Tegal City, problems were also found related to the interior scope of the Al-Irsyad High School building, Tegal City, including; (a) Poorly organized spatial arrangement (b) Less than optimal spatial facilities (c) Noise disturbance in the study room (d) Lack of optimal use of free space. Therefore, it is a matter of note in planning the redesign of SMA Al-Irsyad Al-Islamiyah Tegal to be able to provide quality learning, facility requirements, security and comfort for space users, especially students.
