

ABSTRAK

PT. Pos Properti Indonesia merupakan anak perusahaan dari PT. Pos Indonesia, proses perhitungan gaji karyawannya masih dihitung secara manual yaitu dengan menggunakan Microsoft Excel. Banyak kendala yang timbul dengan cara perhitungan seperti itu, maka perlu dibangun sistem yang dapat membantu pekerjaan dalam perhitungan dan pencatatan untuk menentukan besaran gaji karyawan. Dibuatlah Aplikasi Penggajian Karyawan berbasis web di PT. Pos Properti Indonesia. Aplikasi dibangun menggunakan bahasa pemrograman PHP dengan database MySQL, dan *framework CodeIgniter*. Aplikasi ini memiliki fitur untuk mengelola data karyawan, mengelola data jabatan dan data bagian, menghitung besaran tunjangan beserta besaran gaji karyawan. Memproses dan menghasilkan laporan rekap data tunjangan jabatan dan gaji karyawan serta adanya fitur untuk cetak slip gaji karyawan.

ABSTRACT

PT. Pos Properti Indonesia is the subordinate company of PT. Pos Indonesia, in which the process of calculating its employee's payment is being done manually using Microsoft Excel. There are some troubles that emerged from using such way of calculation, hence it is required to build a system that is able to help the work in calculating and recording to determine the amount of the salary for the staff. Thus, the Web-based Employee Payroll Application is made in PT. Pos Properti Indonesia. The application is constructed with PHP programming language with MySQL database, and CodeIgniter framework. This application carries the function to manage the data of the staff, the data of office position and the data of its subordinates, which calculates the amount of both allowances and the amount of the salary for the staff. It also processes and produces capitulary report of data on allowance for the office positions and staff salary, and also the ability to print the employee's paycheck.
