

ABSTRACT

One way to measure English ability is to take part in EPrT. This test is to measure someone's English proficiency in academic context, for example as a qualification for admission college student graduation or as qualification for graduate student. But until now there is not yet any effective, flexible, and cheaper way to help IT Telkom's students to preparation the test itself. Therefore the solution is to make a website base test.

This website is about EPrT trial test including the analyzer on the test score result. This website can be accessed by all IT Telkom academias. Therefore, the standard is from IT Telkom EPrT standard. The analyzer is presented along with this website. The analyzer is used to analyze EPrT score.

This website used MySQL and PHP language program. The test was made like the real EPrT along with time allocation for each question. This website is expected to help IT Telkom academicias prepare for the real EPrT. From the questionnaire result, the analysis through software can help user to know their lackness in test. The conclusion from the survey result that most of the students never taken the online test before, therefore with this website can help students prepare the test online through intranet connection.

Keywords: *EPrT, website, MySQL, PHP, analysis through software*
