Abstract

Blog is a tool for sharing information in Intenet which its popularity is increasing. But many Blogs that have good content but people don't know about their existence because some things like Blog just appear or the promotion of the Blog is bad. Because of that, need to made a package like a web application that can merge some Blogs become one and grab the contents for displayed in the web page, so that the contents always read by other people.

This final project develops a web application that can merge some Blogs become one with implements AJAX on this web application for optimum performance if this web application must online.

Input for this web application is Blog with WordPress engine that all of its contents will grabbed by a method that go along its feed address. Then analyzing the performance of this application web by calculate time speed of server process and access time speed on client with some condition as one of many things that affect user's pleasure in using this application web.

Keywords: Start Page, Blog , WordPress, AJAX
