

Abstract

There is some big hot issues within php web *developer* community like *development* speed, limitation of tools provided for supporting the *development* process, maintainability and readability issues. That is the main objectives of *agile* best practices techniques , which is concurrent with *agile* manifesto that value more for working software and responding to change.To implement *agile* best practices, there is some php *framework* that offer solution to eliminate the problems. One of them is symfony *framework*.

This final assignment will be discussed about how to implement *agile* best practices using symfony *framework* into the *development* of groovel : online trip planner as the case study.

Keywords : agile, framework, symfony
