

Abstract

In this final project, an Application of Transaction Handling in Theodore.co have been made using Delphi 7 and MySQL as the database.

Theodore is a distribution house, active in fashion. Nowadays the transaction handling in Theodore.co is done manually and not very helpful for Theodore in handling its business process. The transactions are selling, order, exchange, canceling, order complaint, giving the order to the consumer, order reception from factory, service, stockist and giving the supplier's share of sale. The transactions in Theodore.co needs coding, transaction record, database and reports that help them to handle their business process.

This transaction handling application is expected to help Theodore.co in recording their transactions in operational activity.

Keyword : *Transaction Handling Application, Delphi 7, MySQL.*
