# ABSTRACT

In this final Project have been realized "The Ticket ordering system of train through SMS" which can be used by candidate of passanger of train to ordering ticket using SMS. There are some advantages of this system such as : to do registration as a member of ticket ordering, conducting ticket ordering through SMS everywhere and everytime and also can cancelled the ordering that had been done.

This final project built using analysis and structured design with waterfall model. And the database built with SQL servers, with Power Designer as a tool for system modeling, and Visual basic 6.0 for developer software tool.

Keyword        : S*oftware, Waterfall, SQLServer, Visual Basic 6.0*
