

ABSTRACT

In this final project, we had implemented software capable to support activity of test administration in Jurusan Teknik Informatika STT Telkom. This software also can be used by other user, besides the worker of test administration. This software also have able to do record-keeping of test administration, see test data, manage administration worker, manage tariff, making of minutes and report.

This Final Project was built trough structured design and analysis with the waterfall modelling. This application was implemented using PHP and Java Script, MySQL as database system, and Fireworks 8 and Macromedia Dreamweaver 8 as graphical design software. And also Microsoft Visio as a tools for modeling system.

Keyword : Test Administration, Waterfall.
