

## **ABSTRACT**

As the growth of information technology, a media that provides information and communication is needed. Because of that website can be chosen as an information exchange media or as a communication media between school, students and parent. Website is being chosen because it's very effective and efficient as an information provider media and maintain a website needs special ability in design, programming, or big budget for making a portal-website.

For a school with limited budget or less human resources. It's difficult for the school to build web based school portal. That's why an application is needed to ease the school on build and maintain a website or school portal, the application known as CMS (Content Management System). CMS is software that is used to manipulate content of website. The purpose of manipulating is to add, edit or delete content of a site.
