

## Abstract

Indonesian Republic Police Department (POLRI) especially in Security and Intelligent Unit (SatIntelkam) ordering public service in unit area has responsibility to give a great services to public society, to publish statement and permission letters as a prove for the society based on the needs that have law force from POLRI. With the Information Technology (IT) as the backbone to support the activities, so they can be done easily. It was undeniable by using Information Technology, POLRI will have tons of data that could be process to be information that will be needed by them especially in Security and Intelligent Unit (SatIntelkam).

This project is to make a public service application that hopefully with it, especially in Security and Intelligent Unit (SatIntelkam), no longer needs to store public society's data that make letters that related with police department manually. It will be build by using Borland Delphi 5 for the programming script, SQL Server for the database, Microsoft Visio and Power Designer for the system model's, and Adobe Photoshop for the design of interface.

**Key words : WNA's Data, Police Record Statement Letter (SKCK), Report Letter (STM), Report Receivement Letter (STTP), SQL Server, Borland Delphi.**
