ABSTRACT

Rental Comics Crayon is a place of borrowing or comic novel, which is located in the PGA, Dayeuhkolot. Currently, the system that used to manage lending activities in the Rental Comics Crayon is still with the manual system. All activities and transactions done manually, from the insert data, search data, update data, the calculation of the fine, up to the creation of a report are done manually, the hand writing. Therefore, Rental Comics Crayon requires an application for help all the activities that support the business to run smoothly.

The final project aim is to build a rental application or a comic novel. It is expected that with this application can help Rental Comics Crayon in their bussiness activities such as rental transaction, the calculation of the fine, print reports periodically, insert comics or novel and new members, etc. The final project will be made using the Java programming as the script and SQL Server for its database.

Keywords: application of Rental Comic Crayon, the data processing
