ABSTRACT

HMIF is the organization in IT Telkom Bandung. Generally, It's purpose is to serve informatic's students.Year by year, HMIF has done a lot of events to facilitate informatic's students. HMIF has vision and mission to build the informatic's graduate which has great quality on hardskill and also softskill.

In order to make the vision come true, HMIF has a sistem which is expected can improve the activities of HMIF's members. Actually, the system that has been used is not effective because it is manually processed. It means, the management of data still use Microsoft Excel and data is saved not by using database. The result is data is not wisely managed. The HMIF's members also has a problem to use data.

To make HMIF continue developing in a better direction, HMID evaluate all its member by monitoring its member in a previously allocated time period.

The HMIF's application which is built is web based application using PHP script. The data will be saved in MYSQL database. This HMIF's application is used to manage the members data.

This application is expected can help HMIF so the activities of HMIF's members can be better.

Key word: based application, HMIF's application, *MySQL.*
