ABSTRACT

Transmigration and Labour Affairs Department is the one of many goverment departments that have complex business process in managing they data. Event of the staffing subsection that manage all staffs data and processing all staffing rules. Now, in managing staffing data still use manual system that not computerized, not distributed in saving data and not well documentation. Where in managind the data still use Microsoft Word and Microsoft excel, doesn't have a database for savibng data, data sharing doesn't use network but use printout hardcopy.

Therefore, the last project "Staffing Information System of The West Java Transmigration and Labour Affairs Department Web Based" becomes media to managing staffing data in staffing subsection covering staff data management, and other staffing administrations and many components to support this web application.

The last project are built with use software engineering method is *waterfall*, and implementation use PHP programming language, and processing of database use MySQL.

Key word : staffing information system web based.
