

Abstract

In this final project has been developed an application for recording and managing commercial and saving and loan transaction in Koperasi Pegawai Republik Indonesia (KP-RI) Hikmat Ciamis.

Nowadays, commercial and saving and loan transaction data management have been done manually, which recorded in uncomputerized system for every transaction data. Sometimes it makes cooperative side became difficult when data monitoring. With the existence of application for managing commercial and saving and loan transaction hopefully it could help and simplify KP-RI Hikmat Ciamis in recording and managing transaction and also data monitoring.

This final project is implemented with client-server architecture using Delphi programming language and MySQL database.

Key Words: KP-RI Hikmat Ciamis, commercial transaction, saving and loan, Delphi, MySQL, client-server
