

ABSTRACT

Land Affair Office of Blitar Regency is one of Government agency which its duty is public service especially in terms of management handling of land certificate. The main duty of Land affair officer is to public certificates, handling agrarian transactions include right transfer and trades. In Land Affair Office of Blitar Regency itself, there are transactions happened between the government and public. Land certification or registration upon land authority and some more about database regarding to land are often taken by Land Affair Officer with proper and quick act. However, this demand can't be fulfilled because of manual and yet computerized administration service system.

Within effort to overcome this problem, this final project will scope down into making of Land Affair Officer of Blitar Regency's Land Certificate Data Management Application. Not only being used as Automatically Administration Service means, this web based application also helps monitoring of land affair transactions happened in Blitar Regency's Land Affair Office.

This Final Project was made using software engineers method with waterfall method and has implemented through PHP programming language, when on the database processing MySql was used.
