

Abstract

Generally, the management of academic activities at the school level still manual where all activity recorded on a paper and storage into excel file, it makes the management of academic activities are still less efficient. Given the technological developments which are very significant, it would be better if the management of academic activities presented in the form of information system which can be more easily managed. SMA Negeri 2 Pemalang not use information technology to manage the academic activities of the school so there are many weaknesses that can later be reduced so as to assist the various parties involved in this academic activity.

So that made the application of academic activities of students specifically targeted in SMA Negeri 2 Pemalang to assist the management of academic activities such as student management, teacher, lesson, extracurricular activities and teaching and learning activities.

Keywords: academic, teaching and learning activities
