Abstract

In UPTD SMPN 2 Papar, many students feel difficult to find references of subject books, or other references. When students looking for a reference at library, sometimes they also can not find what they looking for because a book has been loan or that book, it is not available.

Therefore needed a new system which can make students will not feel difficult again when they looking for a book or reference which they want to borrow because they just to download it. This systems are implemented with PHP as a software script programming. Beside that, for this database management systems are using MySQL database.

This website is expected to help library staf to provide a read source in softcopy version of existing book collections in library for academic communities UPTD SMPN 2 Papar.
