Abstract

Today the technological developments in communications and computers have brought major changes in the field of human life. Merging these two factors supporting these technologies can provide better information services. Along with a fairly rapid development of technology, information technology has become a necessity that can not be avoided anymore. One application of information technology that is about tuition payment data management systems and management of value on Administrative Malang SMA Negeri 6. Because the data management system in the Administration SMA Negeri 6 Malang that still deemed less appropriate or less effective and efficient is the manual way to perform data management using Excel in the manufacture of paper and reports. So that takes a long time in the recapitulation of the data, other than that this manual can also cause a high risk of data loss and errors in managing data.

Therefore to overcome these shortcomings, the Administration made a specific application used in SMA Negeri 6 Malang to handle data management and the value of tuition payments, so that will help students and teachers in obtaining information quickly and accurately.
