

Abstract

PT Diametral Dharma Persada is a quite large training provider company which has served many company consumers in Indonesia. This company offers several training and consulting services. Therefore, it needs a data management that can manage its large information for company and improve its services to consumers.

In this final project, a Web-Based Training Data Management Application at PT. Diametral Dharma Persada will be developed which contains some functionalities, that is activities data management, participants data management, registration data management, and training programs data management are conducted on admin and operator side. Whereas for public users, this application can be used to register online, view some details of the program and view available training events.

This application uses JSP and JQuery programming language, interface design using Corel Draw and Photoshop, and MySQL database.
