ABSTRACT

KONI Kabupaten Asahan was one of the organization at sportsmanship development existed in Indonesia. Every single year KONI has sponsored accomplishment of sports-event which officially called Pekan Olahraga Kabupaten. Pekan Olaharaga Kabupaten is one of sport-event inter-sub-districts at KONI Kabupaten Asahan for scouting some perfect athletes. Pekan Olahraga Kabupaten itself consist of some action like registration and scheduling that managed by Microsoft excel before.

Those data which managed by Microsoft excel got some obstacles frequently especially related to data athletes, schedules and recaps which has not been stored properly stir into main problem like Difficulties in search information generally, whereas Pekan Olahraga Kabupaten databases was highly strict for KONI.

KONI Kabupaten Asahan needs application to assist KONI Performances. Apps that made was web based application program by using PHP Framework (Yii) and MySQL as database. And for work development method this apps using SDLC with waterfall model. Hopefully with created this application, Searching Information such as schdules and scoreboard could performed instantly and prescisely.

Keywords: KONI, Match, Schedule, Application.
