

ACKNOWLEDGEMENTS

First and foremost, I am thankful to the God Almighty King Jesus Christ for everything I have and everything I have accomplished in my life. Secondly, my deepest and warmest gratitude goes to Professor Dr. Adit Kurniawan and Dr. Arfianto Fahmi, ST, MT. as Thesis Supervisors. Under their tutelage and patience, I developed and learned a lot, and for this opportunity, I am forever grateful to them.

This thesis work proved to be a task for me as I started to learn about 3GPP LTE technology after getting impressed by its popularity in the cellular broadband world. I have learned many things about LTE and LTE-A and decided by myself to become the topic of my research work. This thesis still has weaknesses and needs a lot of improvement to make this better. Therefore suggestions and recommendations are needed for better results.

Finally, I would like to express my greatest thanks to my family (my mom, my dad, my sister) for their love, prayer, and encouragement all these years. To Frau Anton, Tommy, Andrina, CGFB, my classmate, thank you for your support and prayer. Without them nothing would be the same and I truly believe that significant part of my progress stems from their endless support and affection.
