ABSTRACT

In Islamic law has sunat to implement aqiqah which is one of the teachings of Islam which is exemplified by the Prophet Muhammad. There is wisdom and the positive benefits that can be learned in it. However, the ease of the public in obtaining complete information on aqiqah still less comprehensive service, both through print and online media. Many blog aqiqah providers who do not update the information and let just the information on the blog.Not only that, based on a survey conducted by the authors search through print media such as newspapers among which newspaper Kompas edition April 2015, newspaper Galamedia and newspaper Tribun Jabar edition May 2015, there was no information regarding the service aqiqah. Additionally, many hospitals and midwife practices that do not cooperate with the service providers aqiqah because it is considered not to have an interest in presenting information aqiqah services.

Therefore, it takes a medium that can assist people in obtaining the information it needs to make Application Services Aqiqah that can provide complete information about the services aqiqah, booking package aqiqah as well as provide facilities to upload proof of payment, assist in delivering the complaint to the services and help partner institutions in the birth of a child entering data that will provide information to the public via the SMS Gateway. This application was made using methods of model waterfall, CodeIgniter framework with the programming language PHP and uses a MySQL database. With this application is expected to assist communities in obtaining complete information on services aqiqah.
