

## ABSTRACT

---

User management is a mechanism or a way to take over management of user. Managed by the addition or deletion of users, management role, management privilege to users and objects in the database and user profile management. User management is done through the console in the command line using the syntax so it is troubled to errors in the writing syntax. The need to do user management without limited space and time are also needed to help user who have high mobility. Therefore, built a web-based GUI application for user management with the PHP programming language and DBMS Oracle11g to facilitate user to do management user anywhere and anytime. The method used in the making of this application is the Waterfall method. This application can only be used by users who have privilege as a DBA. This application will become alternative tools to ease database users or IT programmers in user management, especially in Oracle 11g.
