*Expanding world of textiles Indonesia, especially in the textile and fashion world can indirectly produce negative impacts. the impact is most often seen in the form of waste. Sentra Kain Cigondewah is the largest fabric trading center located in South Bandung, where a lot of people around take advantage of opportunities by opening a home-based business that produces convection nightwear and home garments. The existence of this home industry is turning out to new problems, are waste production results were not reprocessed and simply dumped into the garbage disposal. Surely this textile waste can be useful and can be recycled into a product that has more aesthetic value and high selling prices. Finally, the project design is done with the title " Exploration of Convection Waste in Kawasan Sentra Kain Cigondewah with Tie Dye and Added Applications Techniques for Fashion Product " which is expected to provide a solution in dealing with the fabric waste were being wasted unnecessarily and become a fashion product that has a sale value.*

*Keywords: Fabric waste, tie dye, added applications, fashion*
