

ABSTRACT

PT. Primarindo Asia Infrastructure Tbk is engaged in the footwear industry, especially sports shoes are produced in a variety of functions and sizes. Production of shoes developed by the company that is Tomkins labelled shoes. Shoes production in the company is high enough for each month. The problems that exist in the company now is on the purchase and storage of raw materials that the absence of an integrated system between parts. As the process of making quotation and purchase order in the purchase, process documentation of receipt of goods that are not integrated between the warehouse with the purchase of raw materials, as well as the lack of raw material supply are integrated so that the flow of information does not go smoothly.

Implementation of ERP in the company that is using the Odoo application for their cost limitations in this research into the key aspects in choosing an application. In implementing Odoo used the module Purchase Management and Warehouse Management. Odoo development that was done using the ASAP methodology so that implementation provides better results, especially in terms of time, cost, and implementation focused on what is implemented.

By using an application on the module Odoo purchase management and warehouse management can make the process of making quotation and purchase orders, supplier control, recording incoming shipment and returns, as well as existing stocks of raw materials warehouse already integrated with each other.

So the use Odoo application can solve the existing problems in pagian purchase and storage of raw materials and the flow of information between parts purchase and storage of raw materials can run smoothly in accordance with the company's business processes.
