ABSTRACT

The existence of a large plastic bag and easily obtainable makes use of plastic bags become uncontrolled, resulting in a waste of plastic bags in large quantities. The character of the plastic bags that can't be broken down to make the waste plastic bags into one of the environmental problems. Various ways have been done by the Government as well as the top public awareness on its own to resolve the problem of waste plastic bags, one of which with recycle waste plastic bags into products of value function better. In the process, yet there are many alternative product design recycle waste plastic bag recycling industry especially in household scale, so that the resulting recycled product impressed monotonous and less able to attract the attention of people to buy the product. In this study the authors try to devise an alternative product designs recycled from waste plastic bag that has a value of function and aesthetics are nice and produced through a simple process that is by using the techniques can be applied, thus macrame on recycling industry household scale.

Key words: waste plastic bags, macrame, fashion products.
