

ABSTRACT

The development of the internet vouchers currently use cards that have been given username and password to login. Internet vouchers use card was feeled less convenient and less comfortable because if voucher card loss that card can used by who found the card .

Therefore, established the registration system more convenient is using the SMS service. That services are very easily understood by the widest society that send voucher internet from sms to private number.

To use internet voucher registration base on SMS Service , users only give their phone number and transaction receipt to cashier and then cashier will input that phone number and choose a package base on valid provision.

With this system will change card that feeled less convenient and less comfortable with SMS service.
