ABSTRACT

In this globalization era accounting system becomes very important to generate information, especially information related to accounting. Information obtained by the enterprises are used as a guide in making decisions on the results of the business processes that run in the business. Project case studies conducted at the Cafe Warunk Dakora, Bandung, a business entity engaged in the culinary field. Results management process is still manual transactions so that financial statements are troublesome, this of course takes quite a lot of time and allow for errors in record-keeping and financial reporting. Therefore, this application aims to simplify the management of transactions in the enterprise. This application uses the programming language PHP and MySQL database. Working methods used is to apply the model stage SDLC and waterfall object-based. Accounting information that will be released this application in the form of journals, ledgers , income statements and cash flow statements.

Keywords : Aplication, Transaction, income statement, Cash flow statement. Cafe Warunk Dakora.
