

ABSTRACT

From year to years, Indonesian game continued to progress although it's still far behind the well-known game developers overseas. But until now still very rare found based desktop game with genre FPS (First Person Shooter) created by Indonesian developer game. Therefore based on these problems, so build game application with genre FPS and that take the horror content with use Unity engine game for add content genre game in Indonesia. The meaning of FPS (First Person Shooter) is a genre of game takes a first person perspective a player so when we play the game we felt like he was doing real action. This game built with engine application game Unity 3D which is a free available open source but can also pay to get a license pro developer. In this game there 3 level play that must traversed in a building to get out safely from interference spirits exist. With this game, so we can add the content of genre game in Indonesian and can a reference for the game developer Indonesian to be further developed genre like this.

Keywords: FPS (First Person Shooter), Unity 3D, Desktop, Horror Game
