

ABSTRACT

Pt Ira Jaya is an organization working in the field of providing services. The main activities are as the place for car appliance - appliance for the purpose of the festival. For this is the potential tenants when you want to use the service fees must come directly to the PT Ira Jaya. By coming directly to the PT Ira Jaya is not a little from the potential tenants from afar using deserving of a lot of time is wasted.

Based on the situation, it made a website car online that can be accessed anywhere and anytime to support the problem above. The design of the system and the data flow on this website using Use case daiagram, for the design of the table - table berelasinya using Entity Relationship Diagram (ERD), and implemented using the PHP programming language and MySQL.

With the existence of the website car appliance this festive season, can facilitate the potential tenants to car appliance - appliance festival without must come directly to the place which resulted in a lot of time is wasted.

Key Words: PT Ira Jaya, car, online+
