ABSTRACT

Putra Mandiri *is a manufacturing company that produces paving blocks, profiles and culverts. In this final project will generate an application* to *make the calculation of production costs by considering the variance job. At the company's many difficulties in recording production costs are still using books such as recording of raw materials, labor costs, factory overhead costs, other than that this company produces goods with wage costs that different* to *the worker correspond with the size and the product is done. So that in the determination of pay and production costs are also given sometimes difficult in its calculations because of missing records used or not written. The production recording applied in this application uses job order costing method. This application is developed using Software Development Cycle (SDLC) method or also called software development cycle using waterfall. This application is built using PHP Programming language and MySQL* basis data*. This application is built* to *obtain the calculation of the main cost production using job order costing method and obtain accountancy record such as journal, subsidiary, cards cost of the order, The Order Cost Report.*

Keyword : Application web based, Cost Production, Job order costing Method
