

## ABSTRACT

---

*The booking process the meat and the skin is still done in person or via a short message. The process that takes place is a major problem because of PT.Putra Bontot can not serve and respond to customers quickly. Therefore Processing Of Data Ordering, selling and Payment Beef, Skin application Using PHP and SMS Gateway is built. The application is built to fulfill the necessary of data processing in terms of the reservations, sales and payments on operational activities at PT.Putra Bontot. This application is built using the waterfall method, CodeIgniter framework with PHP for programming language and MySQL for database and Gateway SMS. This application can also handle the shipping notification in the form of SMS. From the stage of testing, all the functionalities that exist on system will be tested, started from register customer testing, login, managing to change the profile, customer data managing, ordering data managing , items data managing , categories data managing , input bookings managing, payment data managing to the report testing. The result of this application is expected to be a solution for the problems at PT.Putra Bontot, so the daily operational activities are going smooth.*
