Abstract

Nature school in Indonesia in 1997 is the brainchild of IR. Lendo Novo concept so that students can learn while playing and realizing the concept in the school of nature in Ciganjur, south jakarta. Learning methods in a unique and pleasant in Nature Schools can attract the interest of students and be able to deliver new innovations in the field of education. The concept of the natural School applied to area schools make all activities undertaken relate to nature in everyday life so that students will interact with nature, therefore the factor of the sustainable interior design needs in the school so that the process of teaching is done can still explore different natural surroundings with school buildings in general are covered and do not interact directly with nature. The application of the concept of sustainable design in the school of nature more discusses the development of materials as building materials or furniture used for the activity of the students. The development of materials used such as bamboo, coconut shell, rice husk, bottle crates, wood, wooden remnants are applied to the area of the walls and furniture. he selection of this concept aims to let more students understand and know how to keep, maintain and take care of nature with good for the sake of survival in the future.
