

Abstract

In common traditional learning, there are some weaknesses, one of which is the students limitation of receiving additional learning material. The use of e-learning in schools is expected to be a solution to these problems, because generally e-learning contain known traditional learning components such as group discussions, ideas submission and knowledge accumulation [1]. Social Network allow users to do the problem solving, created connection and collaborate with other users, so the authors build e-learning system with Interactive and Colaborative Platforms concept. Interactive and Collaborative Platform made learning as a combination of cognitive and constructive process with social process so it is encourage more active learning and supports better group interaction [2]. The concept of e-learning with Interactive and Colaborative platform and its features, such as news feeds, chat box, like feature and comment along with open course system, are able to increase in the level of E-learner Satisfaction which includes Learner Interface, and Learning Community, also Content and Personalization.

Keywords: *Interactive and Colaborative Platform, Learning Management System, e-learning, E-Learner Satisfaction.*
