

Abstract

Indonesia is one of developing country with a very large of human populations. With so many populations in this country, its possible that Indonesia have so many International achievements both documented and undocumented. Because there so many achievements that never documented, it will affect to Indonesia achievements because Indonesian people will thinking why he must achieve an achievement if it will not be documented.

Because of that, it needs a technology that can manage information about International achievements of Indonesian people. Using ICT (*Information and Communication Technology*) technology, especially website technology that use CI (*Codeigniter*) framework, so the information about Indonesia International achievements can be documented.

“*www.majulahindonesiaku.webuda.com, Website of Indonesia International Achievement*” was made for publication, information magement, and documentation using website. This site can manage employeer information, draft management, news management, people management, tag, feedback, message and photo management. The employeer always monitoring about all of the information on the site on work time, so the information in the site always real-time up to date.

Keywords : management, monitoring, achievement, Indonesia, International, *Codeigniter*
