

ABSTRACT

Schools are working capital assets which is very important in supporting the performance of institutions. Asset Schools need to be managed, in the identification and well maintained so that it is always optimal. For institutions which have the assets in an amount not too much, maybe management can be done manually, for example with the help of application software microsoft office excel or even with manual recording. The amount of the assets of each school in Bandung regency could no longer be done manually on the Asset report that State because they have similarities as well as differences of any assets owned and all schools should create an inventory report assets submitted to the District Education Office in Bandung , State asset website application design for the entire SMA in Bandung regency created by the author is expected to help manage the assets during their life cycle to school with school assets are damaged. Besides the design of these systems can also help the School Operator to provide information that is accurate and fast about the existence, repair history, and the costs already incurred for the management of school assets in whole or per each asset.

The purpose of this study are as follows: to create an application that could help the entire Operator School reports State Assets which is owned by the school quickly and accurately to the District Education Office in Bandung named Online Application State Assets Web Based On High School (SMA) in Bandung District Education Office.

The purpose of this study are as follows : to create an application that could help the entire Operator School reports State Assets which is owned by the school quickly and accurately to the District Education Office in Bandung named Online Application State Assets Web Based On High School (SMA) at the District Education Office in Bandung
